

ABOUT MODI GmbH

MODI GmbH is the market leader in the production of incoming goods systems, which are used for the recording, the registration, the accounting and the matching of electronic modules on component rolls, drypacks, cardboard or trays.

The system guarantees complete traceability. So it is always recognizable which product, batch, lot number or date codes of components when and where has been installed. Defective components can be localized and taken out of circulation quickly and precisely.

The patented ADOMO® technology, a camera combination with deflecting mirrors, is used for fast and detailed detection of barcodes, labels or plain text.

MODI products are MADE IN GERMANY and they stands for german engineering, reliability and longevity.

DESIGN YOUR INCOMING GOODS
TRANSPARENTLY AND WITHOUT ERRORS.

WITH THE INCOMING GOODS SCANNER
FROM MODI, YOU ALWAYS HAVE ALL THE
PRODUCTION COMPONENTS IN VIEW.

ROBO WES
THE FULLY AUTOMATED
INCOMING GOODS SCANNER

www.moditrace.net

ROBO WES

The combination of mechanical and plant engineering in conjunction with modern technologies are among the core competences of MODI GmbH. With the aim of optimizing incoming goods processes, ROBO WES uses robot technology.

The robot arm mounted on the table has been designed so that it can quickly and reliably handle all incoming goods processes. It is used to record, register, account and to match electronic modules on component rolls.

Because of the precision and speed of the ROBO WES, MODI has achieved a technological progress.

The stepless speed setting of the robot arm reaches three times the speed of all available incoming goods scanners in a zero-defect strategy.

FULLY AUTOMATED RELABELINGSTATION

The basic equipment of the system provides that an employee pushes the component rolls on a specially developed trolley into the table and the robot arm registers, labels and sorts them individually on customer request.

By using a sophisticated transport system in the form of a roller or rail system, the ROBO WES can be fed fully automated. The component roll is then transported independently to the appropriate warehouse or for further processing.

Integration in customer-specific processes! Through workshops with the customer, the necessary processes will be integrated directly into the individual system. MODI offers tailor-made solutions in all areas.
